

- NOTES:**
- Slide Machine stand to be positioned at a distance of 2000mm from wall opposite.
 - All walls and accessories to be black, both internally and externally.
 - Cube overall dimensions will be determined by the specification of the distance between the Slide Machine stand and the wall opposite. Internal dimensions are set, while external dimensions may differ depending on cube structure and envelope.
 - Structure is shown indicatively and can differ, but regardless of structural design, it must make sure the internal dimensions, aesthetics and functionality of the art work are not changed or compromised.
 - Door must be designed to be seamless on the outside face of the cube and opening inwards.
 - Door should have staggered design to prevent light infiltration.
 - Door should have a brush seal, or similar seal, at the bottom to prevent light infiltration.
 - Ventilation slot above the Slide Machine must be capped with a perforated grille, material is irrelevant but colour should be black.
 - Viewing holes are shown indicatively and positioning must be confirmed with the artists before added to panels.
 - Cube envelope noted as 2x MDF boards but can be built with different material as long as it is suitable to achieve the aesthetic intent. Must be painted black both internally and externally.

This drawing is for reference only.
Please do not measure from drawing.
Refer to dimensions and notes provided.
